# AFTER APOLLO 11 – 1969 BACK TO THE MOON AND STAY...

# NEED FOR NAVIGATION IN SPACE

- Over 250 moon missions planned already for this decade
- **All require Com & Nav provision means !**
- Many simulation studies already carried out w/r use of GNSS
- Big projects going on:
  - NASA: **ARTEMIS**
  - ESA **Moonlight Initiative**: Lunar Communications and Navigation Services (LCNS)
  - **Chinese Lunar Exploration Program** (CLEP), also known as the **Chang'e Project**

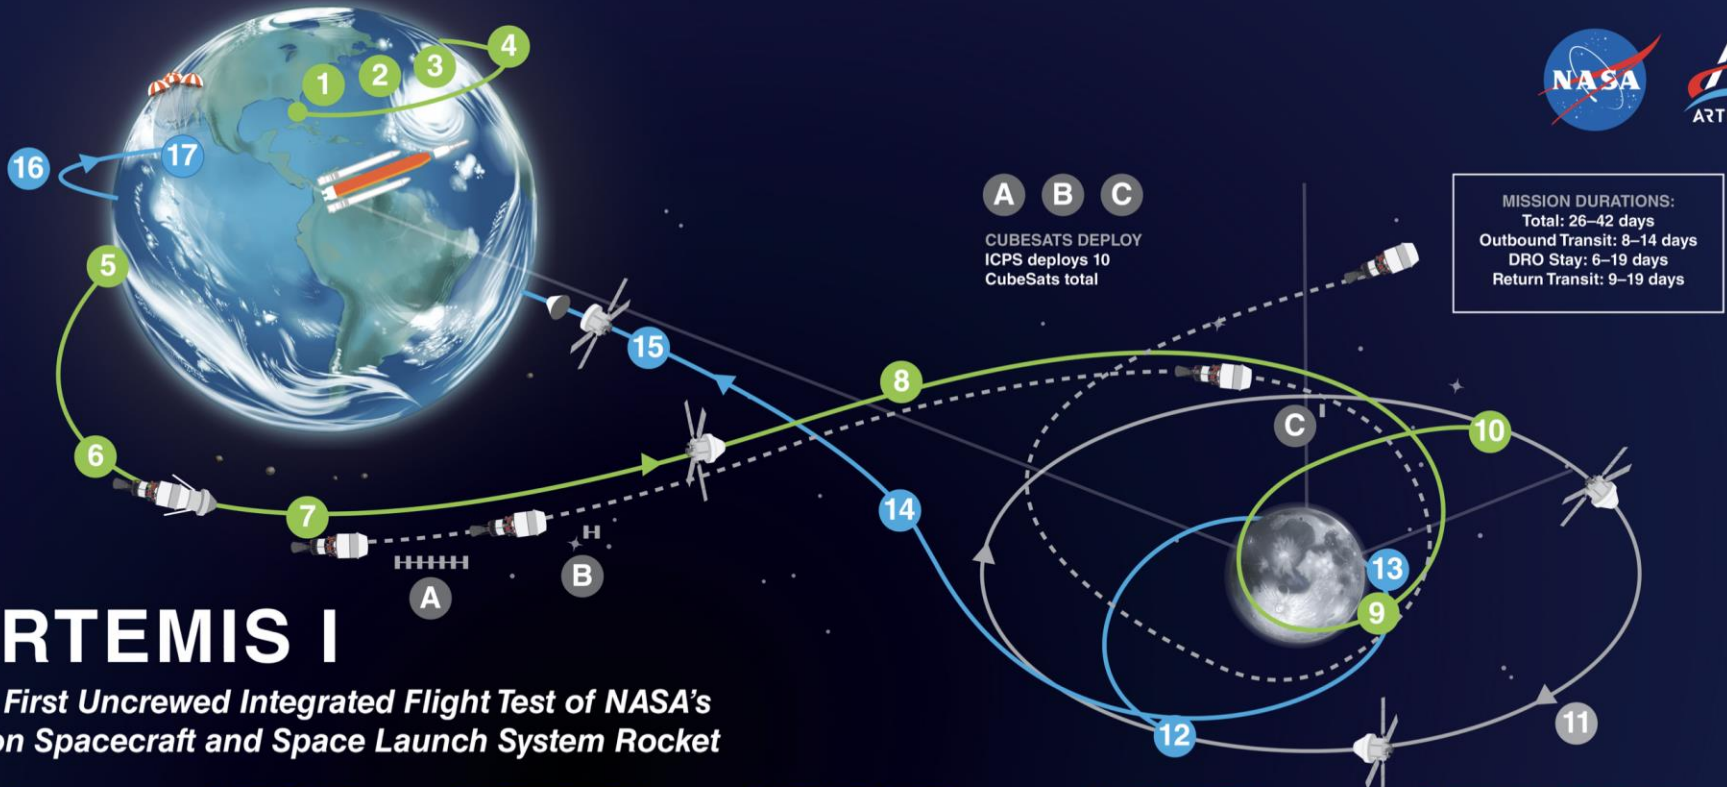

# NASA's ARTEMIS PROGRAM

# ARTEMIS I

## ARTEMIS I

The First Uncrewed Integrated Flight Test of NASA's Orion Spacecraft and Space Launch System Rocket

- 1 **LAUNCH**  
SLS and Orion lift off from pad 39B at Kennedy Space Center.
- 2 **JETTISON ROCKET BOOSTERS, FAIRINGS, AND LAUNCH ABOARD SYSTEM**
- 3 **CORE STAGE MAIN ENGINE CUT OFF**  
With separation.
- 4 **PERIGEE RAISE MANEUVER**
- 5 **EARTH ORBIT**  
Systems check with solar panel adjustments.
- 6 **TRANS LUNAR INJECTION (TLI) BURN**  
Maneuver lasts for approximately 20 minutes.
- 7 **INTERIM CRYOGENIC PROPULSION STAGE (ICPS) SEPARATION AND DISPOSAL**  
ICPS commits Orion to moon at TLI.
- 8 **OUTBOUND TRAJECTORY CORRECTION (OTC) BURNS**  
As necessary adjust trajectory for lunar flyby to Distant Retrograde Orbit (DRO).
- 9 **OUTBOUND POWERED FLYBY (OPF)**  
60 nmi from the Moon; targets DRO insertion.
- 10 **LUNAR ORBIT INSERTION**  
Enter Distant Retrograde Orbit.
- 11 **DISTANT RETROGRADE ORBIT**  
Perform half or one and a half revolutions in the orbit period 38,000 nmi from the surface of the Moon.
- 12 **DRO DEPARTURE**  
Leave DRO and start return to Earth.
- 13 **RETURN POWERED FLYBY (RPF)**  
RPF burn prep and return coast to Earth initiated.
- 14 **RETURN TRANSIT**  
Return Trajectory Correction (RTC) burns as necessary to aim for Earth's atmosphere.
- 15 **CREW MODULE SEPARATION FROM SERVICE MODULE**
- 16 **ENTRY INTERFACE (EI)**  
Enter Earth's atmosphere.
- 17 **SPLASHDOWN**  
Pacific Ocean landing within view of the U.S. Navy recovery ship.

# ARTEMIS II

## ARTEMIS II

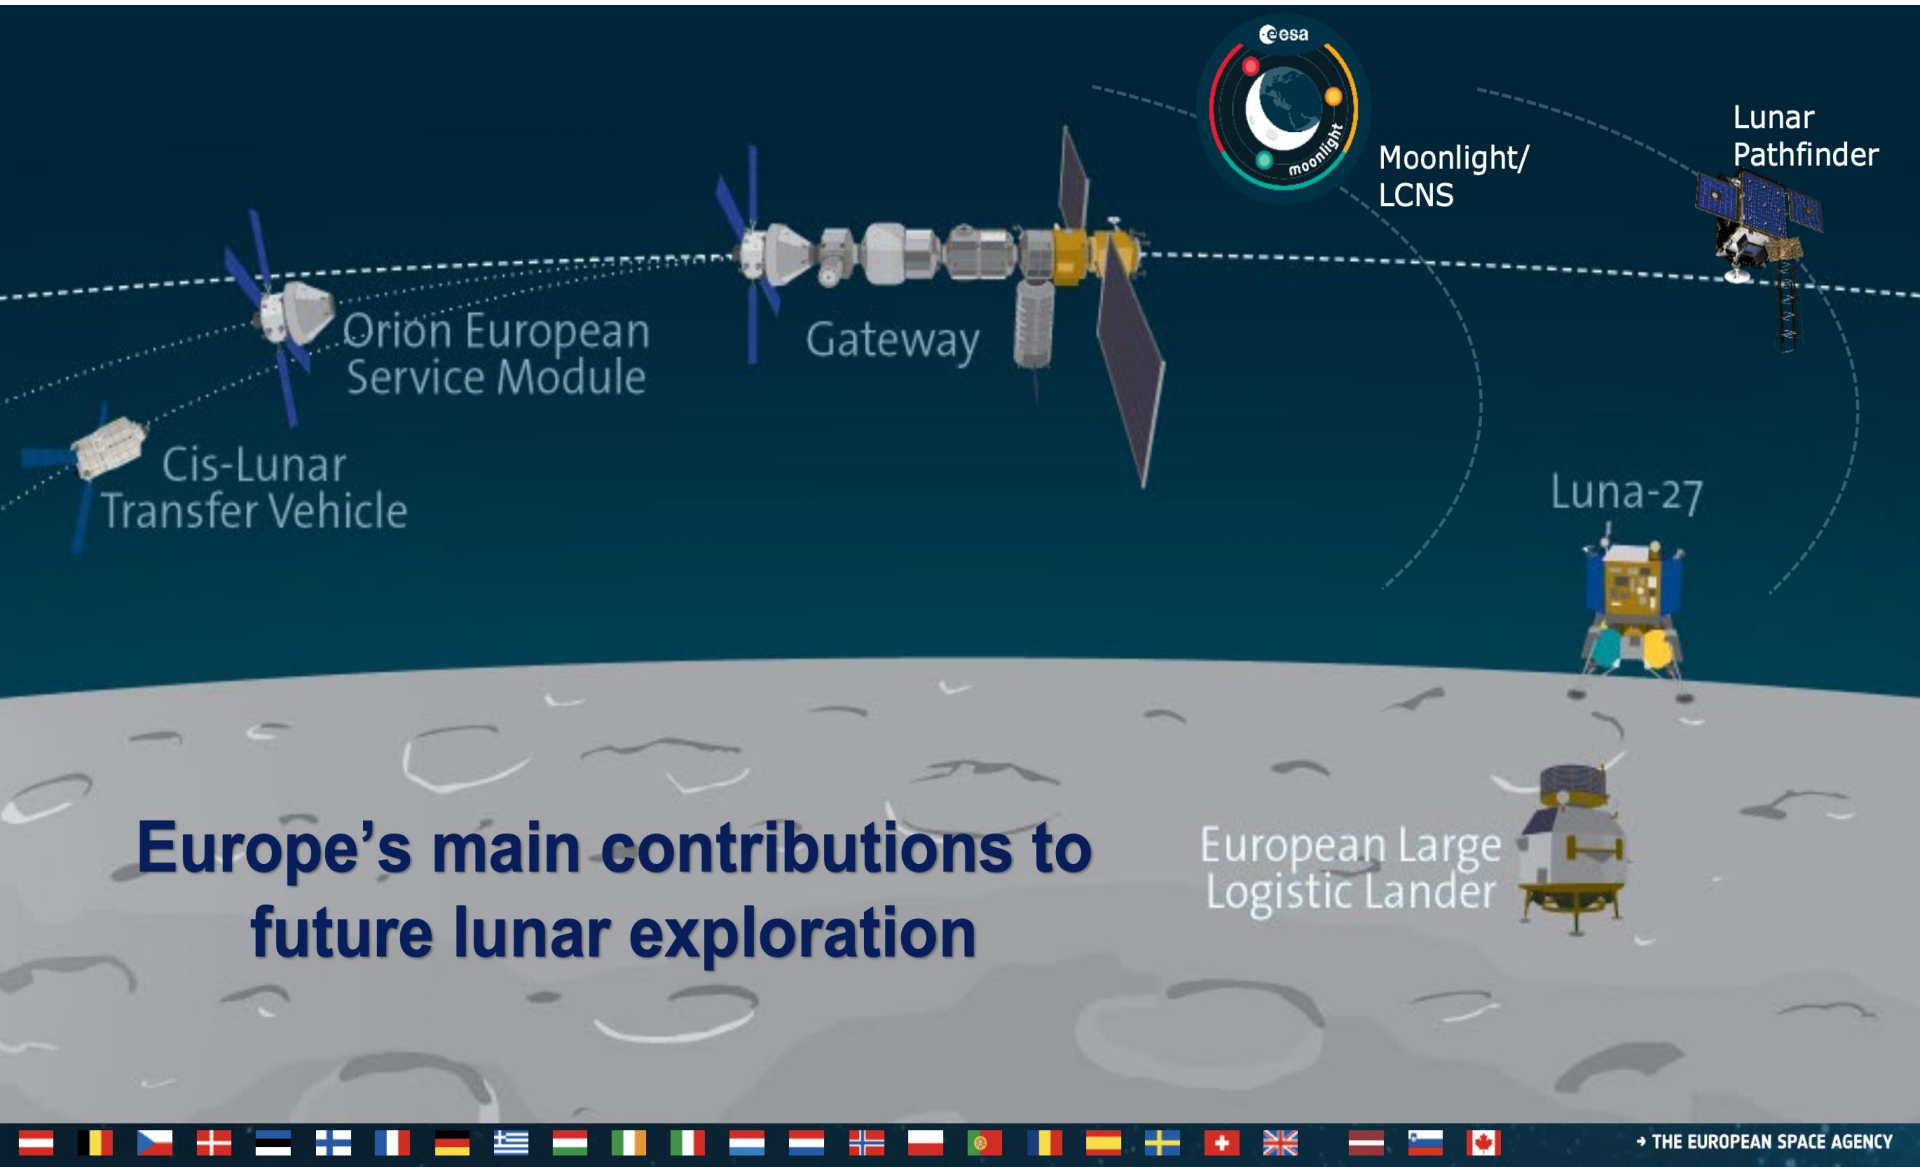

First Crewed Test Flight to the Moon Since Apollo

- 1 **LAUNCH**  
Astronauts lift off from pad 39B at Kennedy Space Center.
- 2 **JETTISON ROCKET BOOSTERS, FAIRINGS, AND LAUNCH ABORT SYSTEM**
- 3 **CORE STAGE MAIN ENGINE CUT OFF**  
With separation.
- 4 **PERIGEE RAISE MANEUVER**
- 5 **APOGEE RAISE BURN TO HIGH EARTH ORBIT**  
Begin 24 hour checkout of spacecraft.
- 6 **PROX OPS DEMONSTRATION**  
Orion proximity operations demonstration and manual handling qualities assessment for up to 2 hours.
- 7 **INTERIM CRYOGENIC PROPULSION STAGE (ICPS) DISPOSAL BURN**
- 8 **HIGH EARTH ORBIT CHECKOUT**  
Life support, exercise, and habitation equipment evaluations.
- 9 **TRANS-LUNAR INJECTION (TLI) BY ORION'S MAIN ENGINE**  
Lunar free return trajectory initiated with European service module.
- 10 **OUTBOUND TRANSIT TO MOON**  
4 days outbound transit along free return trajectory.
- 11 **LUNAR FLYBY**  
4,000 nmi (mean) lunar farside altitude.
- 12 **TRANS-EARTH RETURN**  
Return Trajectory Correction (RTC) burns as necessary to aim for Earth's atmosphere; travel time approximately 4 days.
- 13 **ICPS Earth disposal**
- 14 **ENTRY INTERFACE (EI)**  
Enter Earth's atmosphere.
- 15 **CREW MODULE SEPARATION FROM SERVICE MODULE**
- 16 **SPLASHDOWN**  
Ship recovers astronauts and capsule.

# Recall of ESA Roadmap vision for Lunar Navigation Services

Phase 1: Use of Existing GNSS Systems (2023 – 2027)	Phase 2: Moonlight NAV Initial Services (2027 – 2035)	Phase 3: Moonlight NAV enhanced services (2035 – onwards)
<p><b>Preliminary Lunar PNT services</b></p> <p>Adequate for Earth-to-Moon transfer and Lunar orbit</p>	<p><b>Moonlight Lunar PNT services</b></p> <p>High improvement of lunar orbit PNT services</p> <p>Initial PNT services for lunar landing and lunar surface (South Pole coverage)</p>	<p><b>Enhanced Moonlight Lunar PNT services</b></p> <p>Full lunar surface coverage</p> <p>Improved PNT accuracy and availability services</p> <p>Integrity for PNT safety related applications</p>
<p><b>Earth-based GNSS (Galileo and GPS)</b></p> <p>Use of high-sensitivity GNSS space receivers with high-gain antennas</p> <p><b>Lunar Pathfinder GNSS Payload IoD</b></p>	<p>Earth-based GNSS (Galileo and GPS)</p> <p><b>Initial Moonlight Lunar Navigation Satellites constellation GNSS-like services</b></p> <p><b>MOONLIGHT / LCNS Initial Services</b></p>	<p><b>Enhanced Lunar Communication and Navigation Satellites constellation</b></p> <p><b>Moon surface PNT Beacons / Local PNT Moon augmentations</b></p> <p><b>MOONLIGHT / LCNS: Enhanced Services</b></p>

# ROADMAP FOR LUNAR NAVIGATION SERVICES

<b>Phase 1: Use of Existing GNSS Systems</b> (2022 – 2025)	<b>Phase 2: Enhancing GNSS with Lunar Communication and Navigation System</b> (2025–2035)	<b>Phase 3: Towards an autonomous PNT Lunar System</b> (2035–onwards)
<b>Preliminary Lunar PNT services</b> (low accuracy and availability, low lunar surface coverage, very fast time to service)	<b>Initial Lunar PNT services</b> (improved accuracy and availability, lunar surface service focused on Moon South Pole)	<b>Full Lunar PNT services</b> (final accuracy and availability targets, complete lunar surface coverage, high number of users, providing potentially integrity for safety applications)
Existing GNSS Systems (Galileo and GPS)  Use of high-sensitivity GNSS space receivers with high-gain antennas	Existing GNSS Systems (Galileo and GPS)  3 to 4 Lunar Communication and Navigation Satellites and ground infrastructure (LCNS)  1 or 2 Moon surface PNT Beacons	3 to 4 Lunar Communication and Navigation Satellites and ground infrastructure (LCNS)  Additional Lunar orbiting satellites  Additional Moon surface PNT Beacons  Optional: Existing GNSS Systems

TABLE3 Roadmap vision for lunar navigation services

# CHINESE LUNAR EXPLORATION PROGRAM CHANG'S

PHASE 1. ORBITAL MISSIONS  
PHASE 2. SOFT LANDERS / ROVERS

*Chang's 4 lander on the moon*

*Yutu-2 rover on the moon (Jan 2019)*

PHASE 3. SAMPLE-RETURN  
PHASE 4. LUNAR ROBOTIC RESEARCH STATION

# CHINESE LUNAR EXPLORATION PROGRAM CHANG'S

Mission	Launch Date	Launch Vehicle	Orbital Insertion Date	Landing Date	Return Date	Notes	Status	
							Main Mission	Extended Mission
<b>Phase 1</b>								
<b>Chang'e 1</b>	24 Oct 2007	Long March 3A	7 Nov 2007	1 Mar 2009	-	Lunar orbiter; first Chinese lunar mission.	Success	-
<b>Chang'e 2</b>	1 Oct 2010	Long March 3C	6 Oct 2010	-	-	Lunar orbiter; following lunar orbit mission flew extended mission to 4179 Toutatis.	Success	Success
<b>Phase 2</b>								
<b>Chang'e 3</b>	1 Dec 2013	Long March 3B	6 Dec 2013	14 Dec 2013	-	Lunar lander and rover; first Chinese lunar landing, landed in <a href="#">Mare Imbrium</a> with <a href="#">Yutu 1</a> .	Success	Ongoing
<b>Queqiao 1</b>	20 May 2018	Long March 4C	14 Jun 2018	-	-	Relay satellite located at the Earth-Moon <a href="#">L<sub>2</sub> point</a> in order to allow communications with Chang'e 4.	Success	Ongoing
<b>Chang'e 4</b>	7 Dec 2018	Long March 3B	12 Dec 2018	3 Jan 2019	-	Lunar lander and rover; first ever soft landing on the <a href="#">Far side of the Moon</a> , landed in <a href="#">Von Karman crater</a> with <a href="#">Yutu-2</a> .	Success	Ongoing
<b>Phase 3</b>								
<b>Chang'e 5-T1</b>	23 Oct 2014	Long March 3C	10 Jan 2015	-	31 Oct 2014	Experimental test flight testing technologies ahead of first Lunar sample return; tested return capsule and lunar orbit autonomous rendezvous techniques and other maneuvers.	Success	Ongoing
<b>Chang'e 5</b>	23 Nov 2020	Long March 5	28 Nov 2020	1 Dec 2020	16 Dec 2020	Lunar orbiter, lander, and sample return; which landed near <a href="#">Mons Rümker</a> and returned 1731g of lunar soil to Earth. The service module made a visit to <a href="#">Lagrange point L1</a> and also performed a lunar flyby in extended mission. <sup>[25]</sup>	Success	Ongoing

# CHINESE LUNAR EXPLORATION PROGRAM CHANG'S

Mission	Launch Date	Launch Vehicle	Mission Type	Notes
<b>Phase 4</b>				
<b>Chang'e 6</b>	2024	Long March 5	Lunar sample return	Lunar orbiter, lander, and sample return; scheduled to land at the <b>South Pole–Aitken basin</b> near the <b>lunar south pole</b> . <sup>[16]</sup>
<b>Chang'e 7</b>	2024 <sup>[26]</sup>	Long March 5	Lunar surface survey	Lunar orbiter, lander, rover, and mini-flying probe; expected to perform in-depth exploration of the <b>lunar south pole</b> to look for resources. <sup>[19]</sup>
<b>Chang'e 8</b>	2027	Long March 5	Lunar surface survey	Full mission details are currently unknown; may test new technologies including an <b>ISRU</b> system, ahead of future crewed exploration of the Moon.

# RECEIVER CHALLENGES

## The GNSS receiver has to be extremely sensitive:

- Receiver acquisition and tracking threshold  $< 15$  dB-Hz
- Demodulation of the navigation message due to low signal power challenging
  - *Periodic reception via TeleCommand link from ground*
  - *Use of long-term ephemeris and on-board orbit propagation of clock models*
- Transmit GNSS satellite antenna pattern has to be known accurately

# RECEIVED C/N0 FROM MAIN AND SIDE LOBES

REFERENCE: Mangialardo et al (2021): The full Potential of an Autonomous GNSS Signal-based Navigation System for Moon Mission

# ESA TECHNOLOGY FOR SPACE APPLICATIONS: AGGA-4 MULTI-CONSTELLATION GNSS CHIP

- AGGA-4 (Adv. Galileo/GPS ASIC) available since 2014.
  - Compatible with L1/L5/L2C, E1bc, E5a, E5b, Beidou, Glonass
- Applications
  - Navigation solution, and Precise Orbit Determination (2 cm in GOCE mission)
  - Scientific Radio Occultation (RO) for atmospheric sounding. With MetOp & Cosmic, it is ranked among top 5 sources for Numerical Weather Prediction
  - Rapidly growing interest in GEO / GTO mission: **multi-constellation is key to overcome low SNR**

# LUNAR MISSION SETUP: EXPLORATION MISSION 1 (EM-1)

## Basic Info:

Mission	Exploration Mission 1 (EM-1)
Description	Free-return lunar trajectory with optional lunar orbit phase
Perigee	391 km
Apogee	378 021 km
Inclination	28.5°
Duration	10 d
Attitude profile	TBD (simplification: nadir-pointing)
Receive antenna	High-gain

Courtesy: Stefan Wallner, ESA

# LUNAR MISSION SIMULATION RESULTS

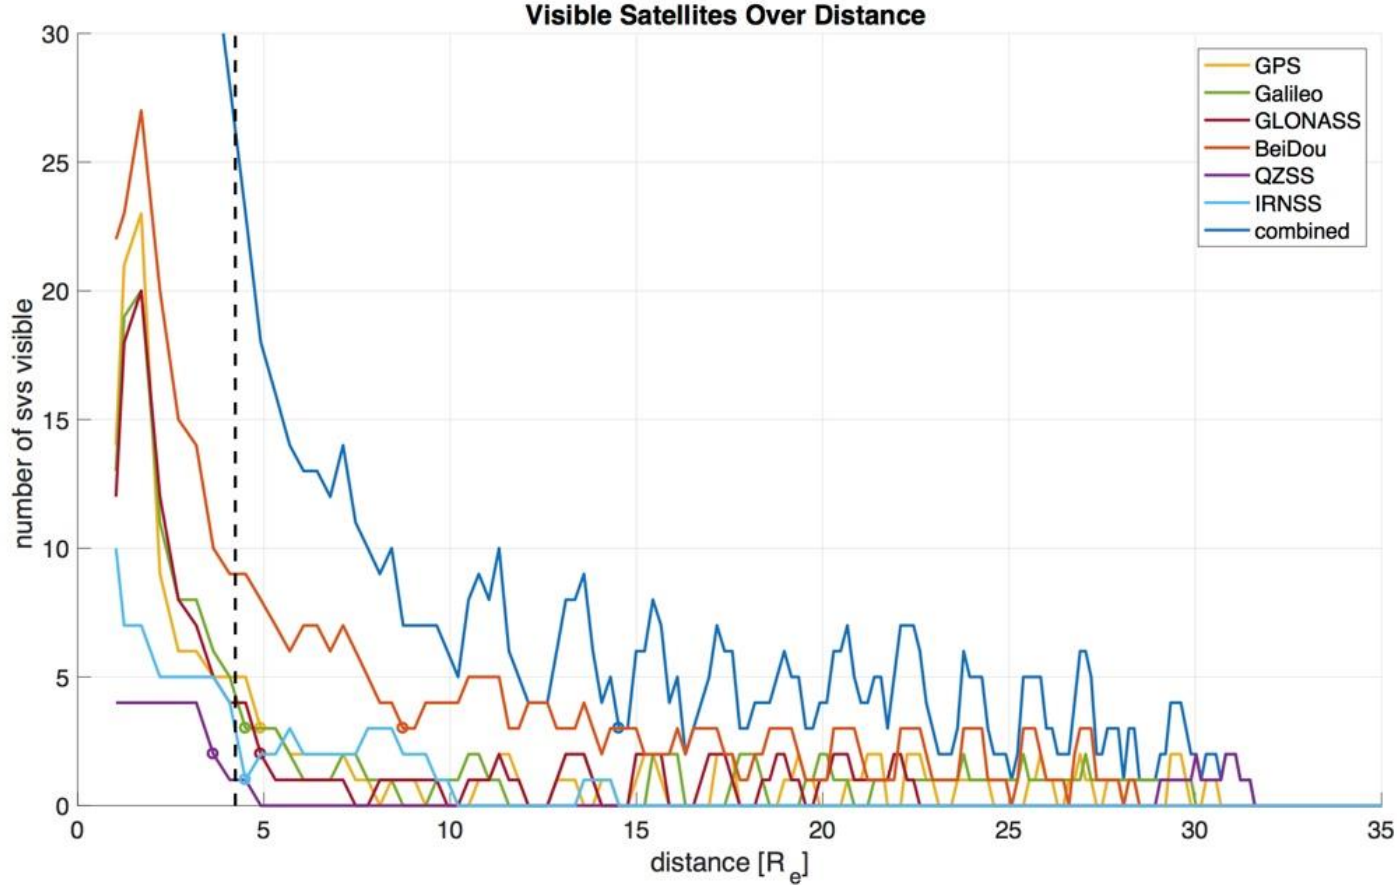

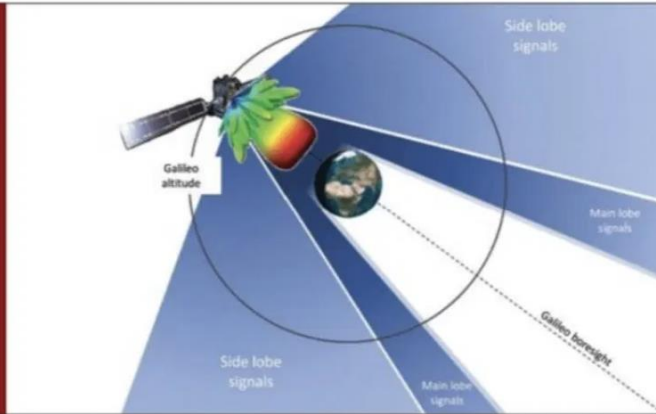

FIGURE 3 GNSS transmit antenna lobes and signal transmission in SSV

# RESULTS

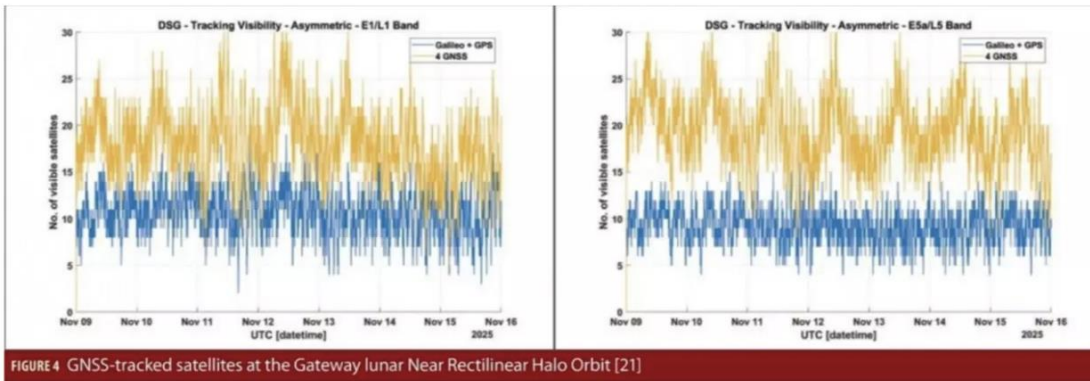

FIGURE 4 GNSS-tracked satellites at the Gateway lunar Near Rectilinear Halo Orbit [21]

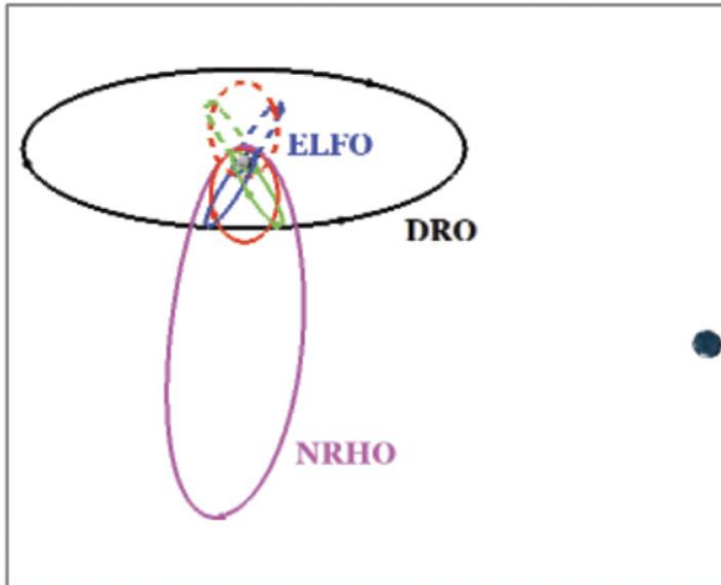

Parameter	
C/N <sub>0</sub> threshold	15 dB-Hz
LNA gain, noise figure	30 dB, 2 dB
Antenna Temp. T <sub>A</sub>	113 K
Antenna gain in boresight direction	14 dBi
Antenna 3dB beamwidth	12.2 °

# CONTENTS

- **SPACE EXPLORATION: NEED FOR NAVIGATION**
- **EARLY GNSS TRIALS IN OUTER SPACE**
- **PRINCIPLE OF GNSS NAVIGATION ABOVE GNSS ALTITUDE**
- **STUDY RESULTS AND RUNNING PROJECTS**
- **OTHER MEANS OF GNSS NAVIGATION IN OUTER SPACE**
- **CONCLUSIONS**

# NOT (YET) EXPLORED

- **Zenith antenna on GNSS satellite**

- Would save approx. 27 000 km in transmission range
- Possible coupling/interference between Nadir and Zenith antennae
- Possible problems with launch rocket dispenser
- No investigations yet

- **GNSS Pseudolite system**

- Moon, satellite in the Lagrange point L1
- Perhaps in Phase 3 or later

L1 lies 1.5 million kilometres inside the Earth's orbit, partway between the Sun and the Earth. Lagrangian points are where all the gravitational forces acting between two objects cancel each other out and therefore can be used by spacecraft to 'hover'.

# CONTENTS

- **SPACE EXPLORATION: NEED FOR NAVIGATION**
- **EARLY GNSS TRIALS IN OUTER SPACE**
- **PRINCIPLE OF GNSS NAVIGATION ABOVE GNSS ALTITUDE**

- **CONCLUSIONS**

# CONCLUSIONS

- Many studies were/are carried out w/r to the use of GNSS navigation for the Moon missions and on the moon
- All are using the principle of the GNSS transmission from the other side of the Earth
- Simulation studies by ESA, NASA and the Chinese show gaps in the GNSS availability
- Limited Position accuracies > 50-100 m in minimum
- **Are those navigation results guarantee the required safety for the Moon missions ?**
- Navigation Requirements not yet fixed

**THANK YOU FOR  
YOUR ATTENTION  
&  
GOOD LUCK  
FOR THE COMING  
MOON MISSIONS**
